

Geocaching.com New Cache Mass Import Utility

How To: Ver 0.2

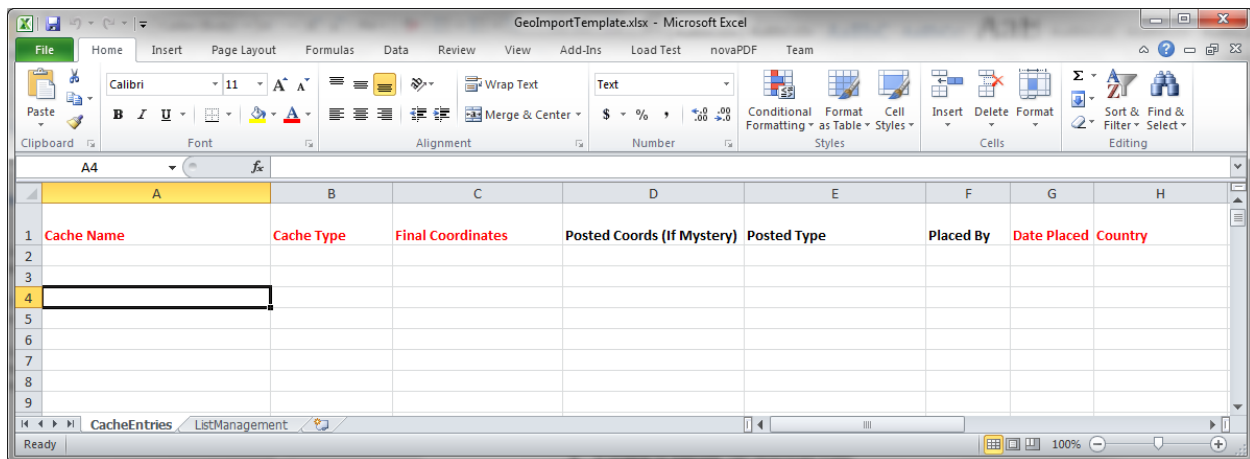

Required Software

- Latest Version of Java Required: Java 8 Update 91
www.java.com/en/download
- Latest Version of Chrome
- Latest Version of Chrome Driver
<https://sites.google.com/a/chromium.org/chromedriver/downloads>

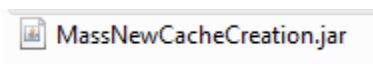

- Utility has been tested for Windows 7 and Mac with latest version of Chrome.
- Early Version/Alpha so may be a little buggy or not always work.

1. Download the most recent version of “ChromeDriver” for your operating system. Place the downloaded file in the same folder as the “MassNewCacheCreation.jar”
 - a. FYI-If its been a while you may need to download a new version of ChromeDriver if your version of chrome has had a few updates if the Uploading utility doesn’t work after you click submit.
2. Run/Launch “ChromeDriver”. Just need to double click the file. (Likely will only need to do once after each time your computer has restarted.)
 - a. If Unable to execute, can download from:
<http://chromedriver.storage.googleapis.com/index.html?path=2.22/>
3. File out Template form with cache submission information (Red Titles are Required Fields) and save file.

4. Run Program. Double click on “MassNewCacheCreation.jar”

5. Fill in Geocaching.com Username/Password, select the excel file you saved above in Step 2, and acknowledge to agree to Terms of Use and the Cache Listing Requirements, and if you want to submit to reviewer right away. Then click OK

6. Script will run and finish, if not it will error out and hopefully display error or stop working (I haven't captured all fail cases yet). Feel free to take screenshot of error and mentioned what was happening and email to chris@cjstolte.com
